

Global Sales Analysis – SQL Queries (End-to-End)

This document contains SQL queries used in the Global Sales / Superstore project for data cleaning, exploratory analysis, and executive-level business insights.

View All Sales Records

```
SELECT * FROM global_sales;
```

Total Revenue

```
SELECT SUM(sales) AS total_revenue FROM global_sales;
```

Total Orders

```
SELECT COUNT(DISTINCT order_id) AS total_orders FROM global_sales;
```

Total Profit

```
SELECT SUM(profit) AS total_profit FROM global_sales;
```

Average Order Value (AOV)

```
SELECT SUM(sales) / COUNT(DISTINCT order_id) AS avg_order_value FROM global_sales;
```

Revenue by Country

```
SELECT country, SUM(sales) AS revenue FROM global_sales GROUP BY country ORDER BY revenue DESC;
```

Revenue by Region

```
SELECT region, SUM(sales) AS revenue FROM global_sales GROUP BY region ORDER BY revenue DESC;
```

Top 10 Products by Revenue

```
SELECT product_name, SUM(sales) AS revenue FROM global_sales GROUP BY product_name ORDER BY revenue DESC LIMIT 10;
```

Category-wise Profit Analysis

```
SELECT category, SUM(profit) AS total_profit FROM global_sales GROUP BY category ORDER BY total_profit DESC;
```

Yearly Sales Trend

```
SELECT EXTRACT(YEAR FROM order_date) AS year, SUM(sales) AS yearly_sales FROM global_sales GROUP BY year ORDER BY year;
```

Monthly Sales Trend

```
SELECT EXTRACT(MONTH FROM order_date) AS month, SUM(sales) AS monthly_sales FROM global_sales GROUP BY month ORDER BY month;
```

Top 10 Customers by Revenue

```
SELECT customer_name, SUM(sales) AS revenue FROM global_sales GROUP BY customer_name ORDER BY revenue DESC LIMIT 10;
```

Duplicate Order Detection

```
SELECT order_id, COUNT(*) AS duplicate_count FROM global_sales GROUP BY order_id HAVING COUNT(*) > 1;
```
